

## I HAVE CONGENITAL HEART DISEASE (CHD)

- ♥ CHD affects 1 in 100 children born each year, making it the most common birth defect.
- ♥ 25% of children diagnosed with CHD will need at *least* one open heart surgery to survive.
- ♥ If I am blue, my oxygen is low. If I appear sunburned, I am not, my blood vessels are constricting because of poor circulation. Unfortunately, this is my normal.
- ♥ The cause of CHD is unknown and while there are treatments and surgeries to help patients, there is no cure.
- ♥ CHD is the most common cause of infant death due to birth defects, but thanks to medical advances, death rates from CHD have declined 30%.
